

# Node.js Basic Routing

---

## Initialize the App

---

```
const express = require('express');  
const app = express();
```

# Define Routes

---

Use specific HTTP methods:

```
app.get('/myPath', (req, res, next) => {})  
app.post('/myPath', (req, res, next) => {})  
app.put('/myPath', (req, res, next) => {})  
app.delete('/myPath', (req, res, next) => {})
```

Apply to all methods for a route:

```
app.all('/myPath', (req, res, next) => {})  
app.use('/myPath', (req, res, next) => {})  
app.use('*', (req, res, next) => {}) //  
wildcard for all paths
```

## Chaining for a Single Path

---

```
app.route('/myPath')  
  .get((req, res, next) => {})  
  .post((req, res, next) => {})  
  .put((req, res, next) => {})
```

## Middleware Functions

---

Add middleware before the final callback:

```
app.get('/myPath', myFunction, (req, res,  
next) => {})
```

# Organize Route Handlers

---

Store route handlers in separate files for cleaner code:

```
// other.js
exports.doSomething = (req, res, next) =>
{ /* do stuff */ };

// main file
const other = require('./other.js');
app.get('/someUri', myFunction,
other.doSomething);
```
